=====
USER PROMPT:

Classify the log severity.

Input: "Disk usage at 85%."
Think step by step about why this is INFO, WARNING, or ERROR.
At the end, give only the final answer after "Answer:".

LLM RESPONSE:
1. **Analyze the input:** The log message is "Disk usage at 85%."

2. **Consider the implications:** Disk usage at 85% is high, but it doesn't necessarily mean an immediate failure or a critical problem. It's a threshold that indicates a potential future iss

3. **Evaluate severity levels:**
  * **ERROR:** An ERROR indicates a critical problem that is preventing normal operation or has caused data loss. 85% disk usage doesn't fit this.
  * **INFO:** INFO logs provide general information about the system's state or operations. While 85% is a state, it's more than just neutral information; it's a signal of something to watc
  * **WARNING:** A WARNING indicates a potential problem or a condition that may lead to an error if not addressed. 85% disk usage is a classic example of a condition that warrants attentio

4. **Determine the best fit:** The message signals a condition that requires attention to avoid future problems. This aligns perfectly with the definition of a WARNING.

Answer: WARNING

At the end, give only the final answer after "Answer:".

LLM RESPONSE:
WARNING

Model: gemini-2.5-flash
Token usage (estimated):
  Input tokens: 44
  Output tokens: 1
  Total tokens: 45
-----

USER PROMPT:

Classify the log severity.

Input: "Disk usage at 85%."
Think step by step about why this is INFO, WARNING, or ERROR.
At the end, give only the final answer after "Answer:".

LLM RESPONSE:
1. **Identify the status:** The log reports that disk usage has reached 85%. This means the system is still functioning, but storage is becoming limited.
2. **Evaluate against ERROR:** An ERROR severity is usually reserved for when a process fails or a resource is exhausted (e.g., "Disk Full" or "Write Failed"). Since there is still 15% space
3. **Evaluate against INFO:** An INFO severity is for routine, expected state changes. While this is a state report, 85% is a significant threshold in systems monitoring that suggests a pote
4. **Evaluate against WARNING:** A WARNING indicates a condition that is not yet an error but could lead to one if left unaddressed. In IT standards, 80-85% is the typical threshold used to

Answer: WARNING

=====

USER PROMPT:

Question: How many "r" are in the word "strawberry"?
Explain step by step by breaking down each letter in bullet points, pointing out the "r" before giving the final answer.
Give the final result after "Answer:".

LLM RESPONSE:
Let's break down the word "strawberry" letter by letter to count the occurrences of the letter "r":

* **s** - Not an "r".
* **t** - Not an "r".
* **r** - This is an "r".
* **a** - Not an "r".
* **w** - Not an "r".
* **b** - Not an "r".
* **e** - Not an "r".
* **r** - This is an "r".
* **r** - This is an "r".
* **y** - Not an "r".

We found the letter "r" three times.

Answer: 3

USER PROMPT:

Question: How many "r" are in the word "strawberry"?
Explain step by step by breaking down each letter in bullet points, pointing out the "r" before giving the final answer.
Give the final result after "Answer:".

LLM RESPONSE:
Let's break down the word "strawberry" letter by letter to find all the "r"s:

* **s** - Not an "r"
* **t** - Not an "r"
* **r** - This is an "r" (Count: 1)
* **a** - Not an "r"
* **w** - Not an "r"
* **b** - Not an "r"
* **e** - Not an "r"
* **r** - This is an "r" (Count: 2)
* **r** - This is an "r" (Count: 3)
* **y** - Not an "r"

Answer: There are 3 "r"s in the word "strawberry".

Model: gemini-2.5-flash
Token usage (estimated):
Input tokens: 53
Output tokens: 101
Total tokens: 154

USER PROMPT:

Question: How many "r" are in the word "strawberry"?
Explain step by step by breaking down each letter in bullet points, pointing out the "r" before giving the final answer.
Give the final result after "Answer:".

LLM RESPONSE:
To determine how many "r"s are in the word "strawberry," let's break it down letter by letter:

* **s**
* **t**
* **r** (This is the 1st "r")
* **a**
* **w**
* **b**
* **e**
* **r** (This is the 2nd "r")
* **r** (This is the 3rd "r")
* **y**

Counting them up, there are 3 instances of the letter "r".

Answer: 3
